WEBSITE PROJECT PROPOSAL 1: QUICKFIX SA

1. Organisation Overview

QuickFix SA is a proposed South African home maintenance company that provides repair and maintenance services to homeowners, tenants and landlords. Its services include plumbing, electrical repairs, painting, general repairs and basic home improvements.

QuickFix SA was established in 2024 by a small team of maintenance professionals who identified a need for accessible and affordable home repair services in Gauteng.

The company's mission is to provide reliable and affordable maintenance services. Its vision is to become a trusted home maintenance provider in Gauteng.

2. Website Goals and Objectives

The website will help customers understand the available services and request assistance.

Its objectives are to:

- Present the company's services and contact details.
- Allow customers to submit service requests.
- Build trust through clear service descriptions.
- Attract at least 200 website visits and 15 service enquiries per month within the first three months.

3. Current Website Analysis

QuickFix SA is a proposed business without an existing website. Customers therefore need a central online platform where they can find service information and submit enquiries.

The new website will address this gap by providing clear service descriptions, contact information and an online enquiry form. This will make it easier for potential customers to understand the services and contact the business.

4. Proposed Website Features

The website will contain five main pages:

- Home: Welcome message, company introduction and links to important sections.
- About Us: Company background, mission, vision and service values.
- Our Services: Plumbing, electrical repairs, painting and general maintenance.
- Request a Service: An enquiry form where customers provide their details, location and repair requirements.
- Contact Us: Telephone number, email address, business location and operating hours.

5. Design and User Experience

The website will use dark blue, white and light grey. These colours will create a professional and simple appearance.

Headings will use Poppins Bold, while body text will use Open Sans. The layout will be consistent across all pages, with a visible navigation menu and clear enquiry buttons.

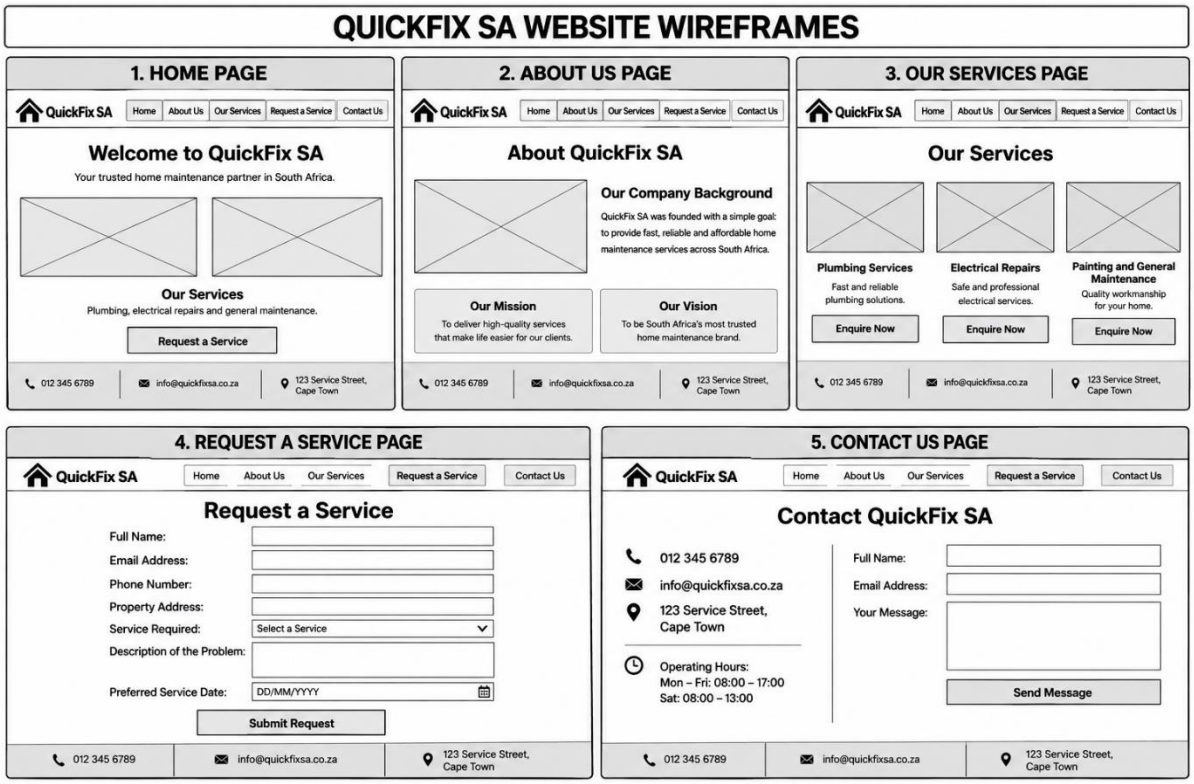

The website will use responsive design to support mobile phones, tablets and computers.

Image allocation:

- Home: 2 images.
- About Us: 1 image.
- Our Services: 3 images.
- Request a Service: 0 images.
- Contact Us: 0 images.

Total: 6 images.

6. Low-Fidelity Wireframe

The wireframe will demonstrate the planned arrangement of the header, logo, navigation menu, main content, service sections, enquiry buttons and footer.

7. Technical Requirements

The website will be developed using HTML5, CSS3 and JavaScript. Visual Studio Code will be used for development, and Netlify will provide hosting through its free hosting plan, subject to its usage limits.

The proposed domain name is www.quickfixsa.co.za, subject to availability and registration.

The service request form will collect customer contact details, location and repair requirements. The form will require a suitable form-handling service to receive and manage submissions.

8. Timeline and Budget

The project will take four weeks:

- Week 1: Planning and content preparation.
- Week 2: Website structure and styling.
- Week 3: Forms and JavaScript functionality.
- Week 4: Testing and deployment.

The estimated first-year website budget is R2,500:

- Domain registration: R150.
- Hosting allowance: R0 using Netlify's free plan.
- Website assets: R850.
- Setup and maintenance allowance: R1,500.

These are estimated project costs and may change depending on the services selected.

WEBSITE PROJECT PROPOSAL 2: STUDENTHUB SA

1. Organisation Overview

StudentHub SA is a proposed online information platform for South African college and university students. It will provide practical academic guidance, study resources and information about student support opportunities.

StudentHub SA was established in 2025 as a proposed digital platform to help students access useful academic information in one place.

Its mission is to make useful student information easier to access. Its vision is to become a trusted online resource for students across South Africa.

The target audience includes first-year students, returning students and learners preparing for higher education.

2. Website Goals and Objectives

The website will provide students with information that can support their academic progress.

Its objectives are to:

- Share practical study and examination preparation advice.
- Provide information about bursaries and student funding.
- Help students improve time management and assignment preparation.
- Attract at least 300 monthly visitors and receive 20 student enquiries within the first three months.

3. Current Website Analysis

StudentHub SA is a proposed platform and does not have an existing website.

Students often need to consult different websites for academic guidance and funding information. The proposed platform will organise useful information in one accessible location while directing students to official sources for applications and funding decisions.

4. Proposed Website Features

The website will contain five main pages:

- Home: Introduction, featured resources and links to important sections.
- About Us: Platform background, mission, vision and purpose.
- Study Resources: Study methods, examination preparation and assignment guidance.
- Student Tips: Time management, budgeting, academic motivation and bursary information.
- Contact Us: Contact details and a form for student questions or suggestions.

Image allocation:

- Home: 2 images.
- About Us: 1 image.
- Study Resources: 2 images.
- Student Tips: 1 image.
- Contact Us: 0 images.

Total: 6 images.

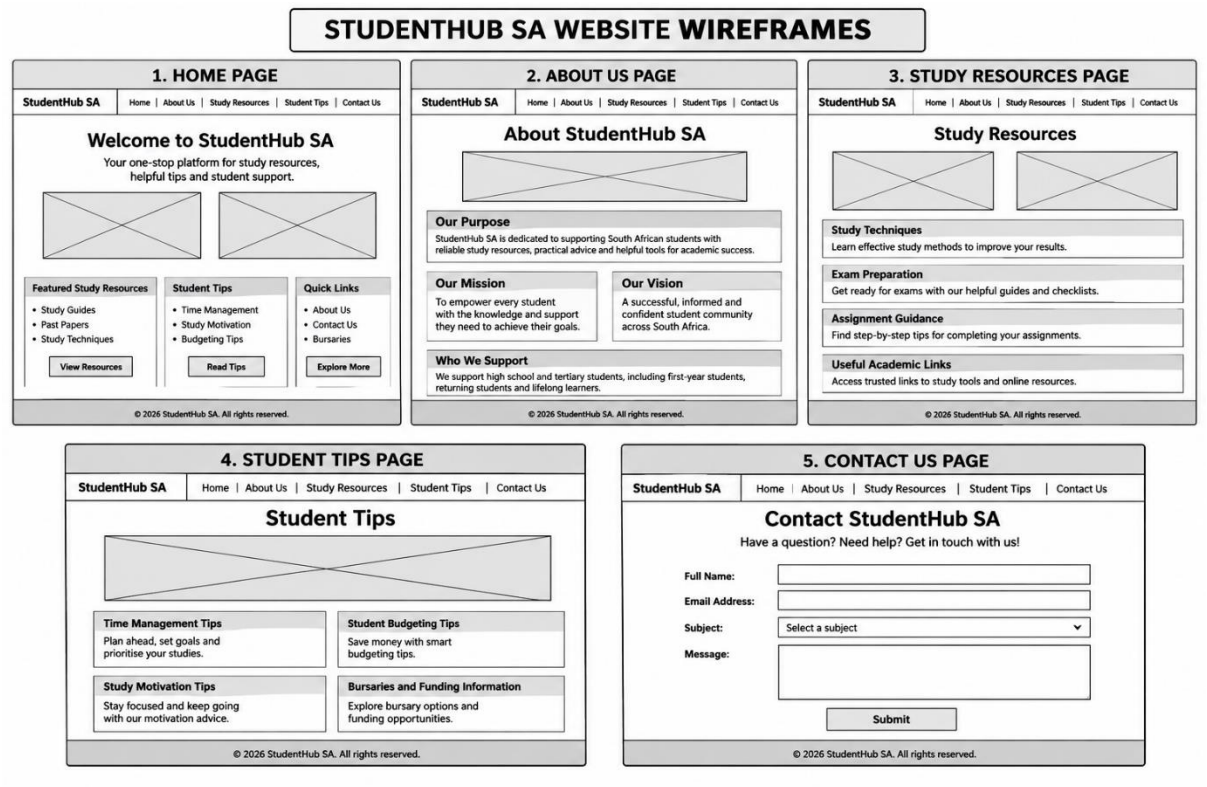

5. Design and User Experience

The website will use navy blue, white and light grey. These colours will create a clean and organised appearance.

Headings will use Poppins Bold, while body text will use Open Sans. Each page will have a consistent navigation menu, clear headings and organised information sections.

The website will use responsive design so students can access it using mobile phones, tablets and computers.

6. Low-Fidelity Wireframe

The wireframe will demonstrate the planned arrangement of the header, logo, navigation menu, welcome banner, study resources, student information sections and footer.

7. Technical Requirements

The website will be developed using HTML5, CSS3 and JavaScript. Visual Studio Code will be used for coding, while Netlify will provide hosting through its free hosting plan, subject to its usage limits.

The proposed domain name is www.studenthubsa.co.za, subject to availability and registration.

The website will include links to official organisations such as NSFAS and the Department of Higher Education and Training (DHET). A contact form will allow students to submit questions and suggestions.

8. Timeline and Budget

The project will take four weeks:

- Week 1: Research and content planning.
- Week 2: Website structure and design.
- Week 3: JavaScript functionality and forms.
- Week 4: Testing and deployment.

The estimated first-year website budget is R2,500:

- Domain registration: R150.
- Hosting allowance: R0 using Netlify's free plan.

- Website assets: R850.
- Setup and maintenance allowance: R1,500.

These are estimated project costs and may change depending on the services selected.
